

Suspected or confirmed COVID-19 case

Infection control

- 1) Place patient on droplet precautions
- 2) Move patient to an isolation room

Patient care

- 1) Assess goals-of-care
- 2) Provide oxygen to keep $\text{SpO}_2 \geq 92\%^1$
- 3) Avoid unnecessary and aggressive use of IV fluids

Is Critical Care support within goals-of-care?

NO

Patient remains at facility

Consider palliative care consultation

YES

Reassess goals-of-care with patient & family prior to hospital transfer if one or more of the following:

- 1) Increasing oxygen needs, unable to be supplied at facility
- 2) Respiratory distress
- 3) Hypotension

For physician-to-physician consultation, the Medical Consult service is available through Locating at 416-756-6002

¹ For patients with COPD or chronic hypercapnia, target SpO_2 is 88 to 92%.
